

Snap-On Drive and Moore Street Improvements Project

July 2021

Concrete Construction

With concrete pavement, curb, and driveway work as part of this project, please note that you should not park or drive on any newly placed concrete before it is opened to traffic. This can cause undue stress and permanent damage to the concrete. Concrete should be allowed at least 7 days to cure. New concrete is sprayed with a white curing compound. This keeps the moisture content high in the concrete to provide for better curing and strength. Do not seal a new concrete driveway for at least three months and avoid the use of deicing salts for the first year.
