

South Sailor Street Improvements Project

Sump Pump Information

The new streets will contain six-inch subsurface drains installed at the bottom of the roadway section to remove subsurface moisture and reduce the risk of frost heaves. These subsurface drains will be located one-foot behind back of curb and will run parallel with the street. These subsurface drains will give residents an opportunity to connect their sump pump discharge lines to avoid the surface discharge that commonly occurs causing pavement deterioration. The sump pump line will be stubbed out 5 feet from back of curb. If sidewalk is present, the sump pump line will extend to the back side of sidewalk.
