

MEMORANDUM

Date: April 13, 2023

To: Stephanie Halford, Executive Director | Grand Forks-East Grand Forks MPO
Teri Kouba, Senior Planner | Grand Forks-East Grand Forks MPO

From: John Cock, Consultant Team Planning Lead | Bolton & Menk, Inc.

Subject: Project Prioritization Methodology for Grand Forks-East Grand Forks Bike/Ped Vision Update
Grand Forks-East Grand Forks MPO

I. Introduction

During 2022 and 2023, Bolton & Menk staff assisted in the update to the Grand Forks-East Grand Forks Metropolitan Planning Organizations long range bicycle and pedestrian plan, titled the Greater Grand Forks Bike/Ped Vision. This plan update includes a variety of recommendations for infrastructure and non-infrastructure investment in addition to policy and programmatic changes developed to build greater support walking and biking in Grand Forks and East Grand Forks, (known collectively as Greater Grand Forks). This plan aims to provide a clean, consistent, and actionable guide for improving walking and biking in Greater Grand Forks. Creating the list of recommendations and refining them was a multi-step, iterative, adaptive process that utilized quantitative data from the existing conditions analysis in conjunction with the qualitative results of public and key stakeholder input.

Network recommendations also reflect:

- Updated project recommendations from previous plans
- Addressing regional barriers such as major roadways, railroads, and river crossings
- Gaps in the sidewalk/pedestrian network
- Gaps in the existing bike network

This memorandum will explain the data-driven process by which totality of the Bike/Ped Vision's recommendations were prioritized, and how that process complemented project engagement efforts.

II. Prioritization Methodology

A. Geographic Information System (GIS) Prioritization

The study team conducted a data-driven prioritization process using Esri ArcGIS, a GIS software package. This prioritization process scored each recommended project based the qualitative analysis of existing conditions detailed in the Existing Conditions technical memorandum. The data-driven project prioritization process scored, weighted, and normalized projects based on the proximity or overlap of the project with select equity metrics, active trip potential, connectivity indicators, level of traffic stress for nearby roads, and a crash analysis. Projects that were given a single point (or flag) per each metric that was within a predetermined distance from the project alignment. Projects with the most points or flags were considered to have the highest need and/or

benefit for future investment.

Project engagement indicated that the public and stakeholders felt that it was important that investment make special considerations for both increasing overall network connectivity, in addition to ensuring that investment make considerations for specific groups that might have greater need for mobility and connectivity improvements. As such, the project team developed two Prioritization Weighting Schemas, which were used to create two sets of prioritization recommendations, based on the ability to meet connectivity or equity goals.

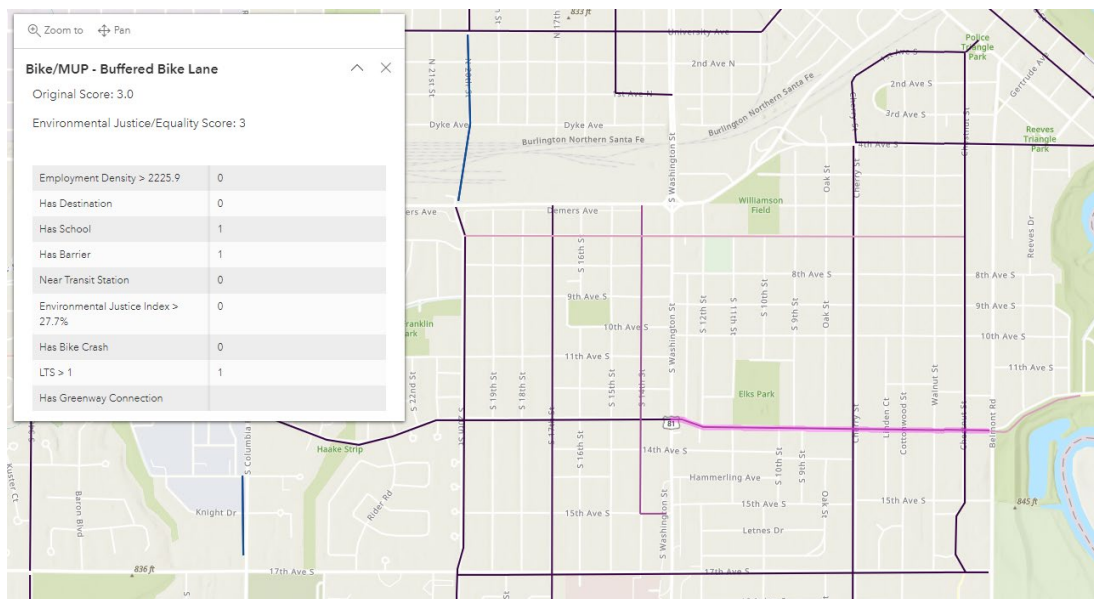

Recommendations for bicycle and pedestrian projects were assessed using the same system, but with certain caveats where a performance metric was not suitable for consideration. These are detailed in **Table 1**.

B. Stakeholder Prioritization

The project team presented the findings of the GIS Equity and Connectivity Prioritization Analysis to the project study review committee in the form of an explorable ArcGIS dashboard (**Figure 1**). Members of the committee could explore the map of recommendations and see how specific project recommendation scored on the prioritization analysis as well as the equity and connectivity sub-analyses.

This was paired with a workshop and digital survey where members of the project study review committee were given a presentation on the prioritization analysis and then asked to provide further guidance and recommendations for locally significant projects. This process allowed for further prioritization that accommodated for project considerations like scheduled reconstructions and local support. This feedback was then used to develop the final list of priority projects.

Figure 1. Example of Project Prioritization Analysis Output

C. **Greater Grand Forks Network Prioritization Criteria**

Table 1. Greater Grand Forks Recommended Pedestrian and Bicycle Network Prioritization

Mode	Prioritization Criteria	Description of Criteria	Connectivity Weight	Equity Weight
Bike Only	Level of Traffic Stress (LTS)	Projects are flagged if they run alongside a corridor with a LTS > 1	2	1
	Greenway Connection	Projects are flagged if they intersect an existing greenway or shared-use-path	2	1
Pedestrian Only	Functional Class	Projects are flagged if they run alongside an arterial or collector	1	1
	Roadway Speed	Projects are flagged if they are adjacent to roads with speeds >= 40 mph	1	1
	Sidewalk Gap	Projects are flagged if they are within a quarter mile of a school	2	2
Combined Pedestrian & Bicycle	Pedestrian or Bicycle Crash Location	Projects are flagged if there has been a reported pedestrian or bicycle crash nearby within the last 5 years.	1	2
	Employment Density	Projects are flagged if they run alongside or within an area that was in the top 50% of employment density census block groups	1	1
	Key Destination(s)	Projects are flagged if they are within a quarter mile of high-value community destinations (downtown district, hospital, grocery store, college/university, etc.)	1	1
	School Access	Projects are flagged if they are within a quarter mile of a school	1	1
	Barrier(s)	Projects are flagged if they cross an identified regional barrier (road, river, railroad)	2	1
	Environmental Justice (EJ) Demographic Index	Projects are flagged if they are adjacent to areas with an EJ Demographic Index > 27.7%	1	2
	Transit Station and/or Route	Projects are flagged if they are within a 1/4 mile of a transit stations (downtown and Columbia Mall) or run along a transit route.	2	1

III. Results

Attachment A provides a list of all recommended projects with their unweighted prioritization score as well as weighted scores for the Connectivity and Environmental Justice sub-analyses. The study development team determined that this list was too long and unwieldy to be useful for the final plan. The results of the qualitative and quantitative analysis were used to identify a short-list of projects for immediate implementation per the City of Grand Forks, City of East Grand Forks, and projects that would land between these two communities. These are detailed in **Table 2**, **Table 3**, and **Table 4** respectively.

Table 2. Grand Forks Recommended Priority Pedestrian and Bicycle Network Projects

Corridor Name	From	To	Facility Type	Length (mi)
17th Ave S	S 20th St	Belmont Rd	Sidepath/Separated Bike Lane with Sidewalk	1.12
13th Ave S	Columbia Rd	S Washington St	Buffered Bike Lane	1.02

Corridor Name	From	To	Facility Type	Length (mi)
Demers Ave	Existing shared used path	Existing shared use path	Sidepath or Separated Bike Lane with Sidewalk	0.07
Minnesota Ave/1st St SE	S 3rd St	3rd Ave SE	Sidepath or Separated Bike Lane with Sidewalk	0.38

These projects are presented as short-list item for feasibility and further detailed analysis to determine if the project is viable, serves community needs. This future analysis will then be used to initiate preliminary design and/or project phasing.

IV. Next Steps

The results of this analysis will be used for the development of priority corridor draft concepts. The results of this analysis should be considered preliminary recommendations and will require further detailed analysis to assess feasibility and environmental impacts, or to initiate preliminary design, or project phasing. Each recommendation should be considered and prioritized through the existing review, scope development, and voting process of member jurisdictions.
