

# CSAH 56 AND CSAH 38 IMPROVEMENTS

July 28, 2023

## Project Scope:

- Sanitary sewer improvements
- Water distribution improvements
- Storm sewer improvements
- Street and curb construction
- Driveway and turf restoration
- Private utility relocation

## City of Long Prairie

615 Lake Street South  
Long Prairie, MN 56347  
Phone: (320) 732-2167  
Fax: (320) 732-2847

## Bolton & Menk, Inc.

2040 Highway 12 East  
Willmar, MN 56201  
Phone: 320-231-3956  
Fax: 320-231-9710

## Overview

The City of Long Prairie is undertaking a construction project to improve the city streets and utilities. The project includes replacing the sanitary sewer mains and services, replacing the water mains and services, replacing the storm sewer system, and reconstructing the streets. The project area includes the following streets:

### CSAH 38 AREA

- 1<sup>st</sup> Avenue SW, from Lake Street to 1<sup>st</sup> Street SW
- 2<sup>nd</sup> Avenue SW, from Lake Street to city limits
- 3<sup>rd</sup> Avenue SW, from Lake Street to 6<sup>th</sup> Street SW
- 1<sup>st</sup> Street SW, from 3<sup>rd</sup> Avenue SW to 1<sup>st</sup> Avenue SW
- 2<sup>nd</sup> Street SW, from 3<sup>rd</sup> Avenue SW to 1<sup>st</sup> Avenue SW
- 3<sup>rd</sup> Street SW, from 4<sup>th</sup> Avenue SW to 2<sup>nd</sup> Avenue SW
- 4<sup>th</sup> Street SW, from 3<sup>rd</sup> Avenue SW to alley north of 2<sup>nd</sup> Avenue SW
- 5<sup>th</sup> Street SW, from 4<sup>th</sup> Avenue SW to 2<sup>nd</sup> Avenue SW
- 6<sup>th</sup> Street SW, from 4<sup>th</sup> Avenue SW to 2<sup>nd</sup> Avenue SW

### CSAH 56 AREA

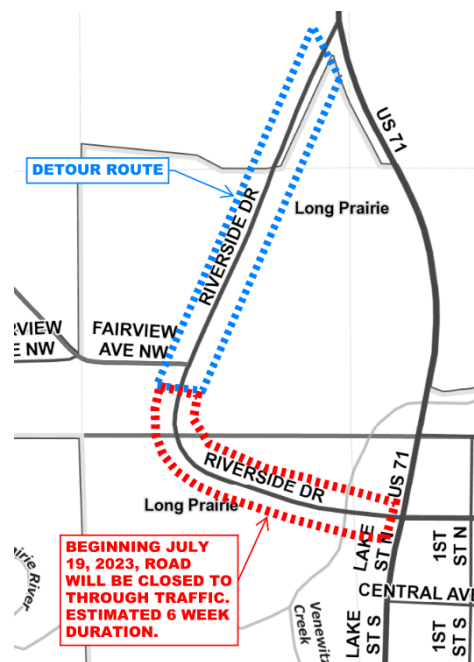

- Riverside Drive from Lake Street N to Highway 71

## Project Schedule

Construction continues. The anticipated schedules for each project area are:

### CSAH 56 / Riverside Drive Project area

- **The south half of Riverside Drive is now closed to through traffic and the north side is open.** See additional information on the following pages.

## Project Schedule - Continued

### CSAH 56 / Riverside Drive Project area (continued)

- **The south half of Riverside Drive is now closed to through traffic and the north side is open.**
- On the north half of Riverside, utility replacement and road construction up to a gravel surface is completed, except for some storm sewer. Utility replacement is underway on Riverside south of Fairview. Concrete and paving will occur after utility and road grading are completed. The south half of Riverside Drive will remain open. Local traffic can access properties in this area from the north or south, depending on the construction activity in progress.
- Underground utility replacement, grading, and construction of the gravel base for the new road on the north end of Riverside Drive is completed.
- Underground utility replacement on the south end of Riverside Drive is underway. When that is completed, the road will be excavated and built up with gravel base, similar to the north end.
- Concrete curb construction on the north half, driveway restoration, and paving will occur after underground utilities and road grading are completed.

### CSAH 38 Project area

- Underground utility replacement, concrete work, topsoil, grading and seeding are completed.
- The contractor had been watering the seeded areas in an effort to get the turf established. Considering the dry conditions, they have stopped watering for the summer and are planning to re-evaluate the turf in the fall. Re-seeding will occur where necessary this fall. In the meanwhile, please mow the seeded areas, with your mower deck at its highest setting, to keep weeds from becoming established.
- **In areas where the new grass is growing well, please continue to water.** The City of Long Prairie encourages all residents to have clean and well-maintained yard. This includes watering and upkeep of grass. This is especially important in the areas affected by this project. The seeding in last year's project area has been completed and grass is starting to grow. When it's dry, the City of Long Prairie highly encourages all residents to water their yards during this time. The city pro-rates your sewer bill to allow for additional water to be used during the summer to maintain your yard; the sewer rate in the summer is an average of winter months. The city averages the sewer rate in June, July, August and September since it's assumed that not all the water is going down the drain.
- Planting trees is completed. If you opted to have a tree planted, you can help it get established properly by watering it. The contractor will also be watering the trees occasionally.
- The top layer of asphalt pavement will be placed after all other work in the area is completed.

### Commerce Road

- Culverts replacement across Commerce Road and across the intersections at TH 71 is completed.
- The first layer of pavement is completed.
- Some driveway culvert replacement, ditch grading, and constructing the top layer of pavement will occur in the coming weeks.
- Topsoiling and seeding will follow.

### 1<sup>st</sup> Avenue S

- The pavement has been ground up and will remain in place as a temporary driving surface until paving occurs.

### Alley between 1<sup>st</sup> Avenue S and 2<sup>nd</sup> Avenue S

- The alley between 1<sup>st</sup> Ave S and 2<sup>nd</sup> Ave S is planned to be improved. This work has been added to the contract to address some of the drainage issues in this area. Improvements to the alley include replacement of the storm sewer with larger pipe and more drainage inlets. The alley pavement will also be removed and replaced.

## Updates

Everyone is encouraged to subscribe to project updates via email or text by visiting [www.longprairieconstruction.com](http://www.longprairieconstruction.com) This website also has maps, schedules, informational videos, and links to these newsletters. If you have questions or concerns at any time, feel free to contact any of the people listed to the left. Thank you for your understanding and cooperation with this improvement project.

## Wells, Sand Points and Temporary Water System

The dewatering system on Riverside Drive will lower the water table, which could cause wells and sand points to become inoperable. If that happens, the contractor will connect your property to city water. This connection is temporary, and will be removed when construction is completed and the groundwater table has returned to normal. **If you have a well or sand point, and it begins sucking air, call Curt at C&L Excavating: 320-493-0173.**

The Contractor is setting up a temporary water system, which will be the source of city water during the project. The water system is typically connected to your house at an outside faucet. The contractor may need to access your house to complete the installation.

## Sewer and Water Utility Bills

The sewer and water bills for all properties that are connected to temporary water will be based on average past use. Properties that were being billed for sewer only will continue to be billed for sewer only.

## Alert

### Private Utilities

Some power poles, gas mains and communication lines will be relocated during the project. This work is necessary to accommodate the proposed improvements. We understand that this work can be disruptive and ask that you please be patient as the various contractors work to complete their individual portion of the improvements. Some of this work is already underway.

### Disruptions to Sewer and Water Service

Water and sewer service will mostly be provided at all times. However, planned shut-downs and disruptions will occur. For any anticipated longer shutoff periods, residents will be notified. Your residence will be connected to a temporary water supply system until the new piping is installed and tested. This may result in a decrease in water pressure.

### Private Improvements in Right-of-Way

If you have improvements such as landscaping, retaining walls, shrubs, bushes, flowers, sheds, irrigation systems, etc. in the right-of-way, it is not the contractor's responsibility to work around them. The property owner is responsible for securing these private improvements and moving them if necessary to allow the project to be constructed. Neither the contractor nor City is responsible for damages incurred to private improvements in the right-of-way. Any underground improvements, such as irrigation lines and sprinkler heads, dog fences, etc., should be located and marked so they are readily visible.

## Access

While certain construction operations are underway, you will not be able to access your driveway with your vehicle. You will be notified in advance when this will occur. When you are notified, please remove your vehicle from your driveway and park it on a nearby street outside of the construction zone. Access to your property will be restored as soon as possible.

In the interest of safety, streets in the reconstruction areas will be closed to non-local traffic during construction. Residents who have access to their home from side streets or alleys should use alternate routes.

## General

The order of work on a street will typically be:

1. Temporary water service will be connected to your house, typically at an outside faucet. In some cases, the contractor may need access to your house.
2. The paved street surface will be removed. Some material may be left in place as a temporary driving surface.
3. The new sanitary sewer mains and water mains will be installed
4. New sewer and water services will be installed
5. Storm sewer will be installed
6. The road will be excavated and reconstructed to a gravel surface
7. Concrete curbs and driveways will be constructed
8. The bottom layer of bituminous pavement will be constructed (the top layer will be constructed next year)
9. Topsoil and seeding

## Work Area

It is very common on these types of projects that area residents (especially children) become quite curious about the work the Contractor is performing. We ask that you please be respectful of and stay well clear of construction zones. Many hazards and dangers exist from heavy machinery, trenches, loose material, confined spaces, hot asphalt, etc. and often times are not recognizable by the general public. The Contractor has responsibility to ensure safety on the project and within the construction area. Any direction from the Contractor regarding safety must be heeded; likewise if you observe an unsafe condition please report it to the RPR immediately.

## Private Work – Concrete and Asphalt

If you are interested in having additional concrete work or asphalt paving work completed on your private property, outside of the project limits, please coordinate this work and arrange payment directly with the contractor.

- For concrete, contact Ryan at Weststar Concrete, 320-980-0539.
- For asphalt paving, contact Craig at Ferguson Brothers, 320-304-9054.

## Driveways

Avoid excessive turning movements and parking heavy vehicles or trailers on new asphalt driveways for up to a week to ensure a satisfactory non-scuff surface. New concrete driveways are sprayed with a white curing compound. This keeps the moisture content high in the concrete to provide for better curing and strength. Do not seal a new concrete driveway for at least 3 months.

## Turf Restoration

Turf will be restored following underground construction and surface grading. A method called “hydro-seeding” will be used. The newly seeded areas will be maintained by the contractor until the turf is established. After that period, it becomes the property owner’s responsibility to maintain the new turf as part of their lawn – providing water, mowing and other necessary care. Mowing too soon or too short can damage or even kill new turf. Set the mower at its highest level; never cut the new turf shorter than 3”.

## Punch List

After the project is substantially complete, the contractor will be provided with a “punch list” of minor defects or uncompleted tasks. That work may take several weeks to complete and may even occur in the following spring prior to paving the final lift of asphalt. This punch list work will require both your cooperation and patience. Please contact the RPR for any issues you feel have not been satisfactorily addressed.
