

STATEWIDE Speed Limit Vision PROJECT

The goal of the Minnesota Statewide Speed Limit Vision Project is to develop a consistent and unified vision related to speed limits supported by cities, counties, special interests, public safety and enforcement. The project includes a literature search, input from technical advisory and transportation user groups, and the development of a vision for speed limits on local roads in Minnesota.

Project Scope

What the project is DOING

We are convening and facilitating a **statewide conversation** to guide a consistent system approach to speed limits.

We will develop a **unified vision** for speed and speed limits.

What the project is NOT DOING

We are **NOT providing guidance** for existing statutes.

We are **NOT providing tools** for cities to change speed limits.
