Comments and Resolutions

1 13-21 Roundabout

Although feedback about roundabouts was generally positive, some comments expressed concern about the need or safety of a roundabout, as well as the importance of educating others on how to correctly use one. The project team will be providing educational opportunities for the public to learn more about the proper use of roundabout at the pre-construction open house and at a post-construction community event. Educational materials will also be distributed at these events and posted on the project website.

2 Improve downtown feel

Comments expressed a desire to improve the feel of downtown in order to attract more people. The May 2018 open house boards located in the Public Involvement tab on the project website outline how the project is striving to make downtown more appealing to all through streetscape elements.

3 What is being built?

Some comments indicated confusion over what was being built and where. The project video located on the project website gives an overview of the improvements. In addition, the May 2018 open house boards also outline the project plan in detail.

4 Detour/staging/access

Concerns were voiced about staging, detours, and access throughout the project. The project website outlines the staging overview, as well as access and detour information. Check the project website in the coming weeks for a detour and staging video as well.
